

Name: _____

Show an appropriate amount of work. You can (and probably should) check your work with a computer.

1. Compute and simplify a bit all possible values of

1.1. $z = \left(\frac{i}{1+i}\right)^3 =$

1.2. Roots of $z^5 = -32i$

$z =$

1.3. Roots of $(z - i)(z^2 - 4iz + 5) = 0$

$z =$

2. Sketch and label the sets

2.1. Points C_1 satisfying $|z + i| < 2$.

2.2. Points C_2 satisfying $\operatorname{re}(z - i) = 1$.

2.3. Points C_3 satisfying $\arg(z + i) = 3\pi/4$.

Out[]=

3. For $f(z) = u(x, y) + i v(x, y)$ and write down the CR equations

and

3.1. Explain why u satisfies $u_{xx} + u_{yy} = 0$.

3.2. Is $i x^3 - 3 x^2 y - 3 i x y^2 + y^3$ analytic? If it is write down $f(z)$.

3.3. Is $i x^3 + 3 x^2 y - 3 i x y^2 + y^3$ analytic? If it is write down $f(z)$.

3.4. Is e^{x-iy} analytic? .

4. Explain steps and show appropriate work.

4.1. Compute $\int_0 e^{1/z} dz$ for the ccw unit circle. #5.6.1 p166

4.2. Show $\int_0^\infty \frac{dx}{x^4 + 2x^2 \cos(2\alpha) + 1} = \left| \frac{\pi}{4 \cos(\alpha)} \right|$ #5.6.4 p166

4.3. Show $\int_0^\infty \frac{e^{-x} - \cos(x)}{x} dx = 0$ #5.6.5 p166

4.4. Show $\int_{-\infty}^\infty \frac{dx}{1+x^{2p}} = \left| \frac{\pi}{p \sin\left(\frac{\pi}{2p}\right)} \right|$ #5.6.7 p166

5. Reminder $\frac{d}{dz} (\arcsin(z)) = \frac{1}{\sqrt{1-z^2}}$

5.1. Discuss the singularities of $f(z) = \arcsin(z)$ for $z \in \mathbb{C}$

5.2. Compute two non-zero terms of the Taylor Series for $f(z)$ about $z = 0$.

5.3. Compute the general term of the Taylor Series for $f(z)$ about $z = 0$.

5.4. What is the radius of convergence for the TS about $z = 0$?

5.5. What would be the radius of convergence for the TS about $z = i$?

6. $f(z) = \sum_{n=-\infty}^{\infty} a_n z^n$ is the Laurent Series for f about $z = 0$.

6.1. What is the name for a_{-1} ? Why is it particularly important?

6.2. Write down a simple formula for a_n with $n \geq 0$ valid when f is analytic near $z = 0$.

6.3. Write down a formula for a_n valid when f is not analytic near $z = 0$. Explain when this formula is valid.

7. Compute $\lim_{n \rightarrow \infty} \sum_{k=-n}^{k=n} \frac{1}{n^4 + 1}$ using a contour integral. Explain your steps and show appropriate work. In this problem you do not need to compute residues. If you have defined f and z_i you can just write $\text{res}(f, z_i)$ for the residue.

8. For the closed counter clockwise contour Γ shown below

$$p_1(t) = \boxed{} \text{ for } 0 \leq t < 1$$

$$p_2(t) = \boxed{} \text{ for } 0 \leq t < 1$$

$$\int_{\Gamma} f(z) dz = \int_0^1 \boxed{} dt + \int_0^1 \boxed{} dt.$$

For $f(z) = \frac{z^2}{z-i}$ evaluate $\int_{\Gamma} f(z) dz = \boxed{}$. Show appropriate work below.

Out[]=

9. For the closed counter clockwise contour Γ shown below

$$p_1(t) = \boxed{} \text{ for } 0 \leq t < 1$$

$$p_2(t) = \boxed{} \text{ for } 0 \leq t < 1$$

$$p_3(t) = \boxed{} \text{ for } 0 \leq t < 1$$

$$\int_{\Gamma} f(z) dz = \int_0^1 \boxed{} dt +$$

$$\int_0^1 \boxed{} dt + \int_0^1 \boxed{} dt$$

For $f(z) = \frac{i}{z-(1+2i)}$ evaluate $\int_{\Gamma} f(z) dz = \boxed{}$.

Explain the need for care when evaluating these individual line integrals using FTC and logs.

Out[]=

10. Compute $\int_{\Gamma} \frac{e^z}{(z^2+9)(z-3)} dz =$ for the counter clockwise contour Γ . Show appropriate work.
